PRASANTH

Python Developer | Backend Developer

Chennai, Tamil Nadu | prasasha2226@gmail.com | 6380411031 | linkedin.com/in/prasanth-prasa222 | github.com/prasasha

PROFESSIONAL SUMMARY

Computer Science and Engineering graduate (2026) building backend applications with Python, FastAPI, REST APIs, SQL, and SQLAlchemy. Built and deployed a full-stack, AI-integrated workforce management platform with 23 REST API endpoints, relational data models, and a live React dashboard. Completed a Python programming internship developing API-driven applications. Seeking an entry-level Python Backend Developer role.

EDUCATION

Alpha College of Engineering, Anna University *2026*

Bachelor of Engineering (B.E.) *Computer Science and Engineering | CGPA: 8.2/10*

EXPERIENCE

Python Programming Intern, Oasis Infobyte (AICTE OIB-SIP) *Sep 2026 Oct 2026*

- Built a command-line BMI Calculator in Python with input validation (negative, zero, and non-numeric values), four-category classification, and exception handling.
- Created a Password Generator with user-defined length (minimum 4), mixed letters, digits, and symbols, and input validation.
- Built a Weather Application using the Open-Meteo and Geocoding REST APIs (Requests, JSON) with handling for invalid cities, empty input, network errors, and request timeouts.
- Used Git and GitHub for version control; published public repositories with READMEs: BMI Calculator, Password Generator, Weather App.

UI/UX Designer Intern, PH Online Ventures Private Limited *Jul 2025 Aug 2025*

- Designed wireframes, screens, and interface components in Figma for an e-commerce application, following usability best practices.
- Collaborated with the team to iterate on designs based on feedback and usability considerations.

PROJECTS

AI Employee Workforce Platform *Live Demo | GitHub*

- Engineered a full-stack, AI-powered workforce management application covering employee, task, and performance modules.
- Built and documented 23 REST endpoints in Python and FastAPI: CRUD for employee, task, and performance modules with Pydantic validation, plus 8 AI endpoints (insights, risk prediction, smart task assignment, assistant), validated end-to-end via Swagger/OpenAPI.
- Designed three relational models (employees, tasks, performance), including a foreign-key link from tasks to employees, and implemented persistence with SQLAlchemy and SQLite.
- Developed an interactive React dashboard to visualize workforce and performance data in real time.
- Integrated Google Gemini AI for workforce insights, employee analysis, and an assistant feature, with fallback handling for when the API is unavailable.
- Handled frontend-backend integration end to end and deployed the application using Render and Vercel.

Tools Used: Python, FastAPI, Pydantic, SQLAlchemy, SQLite, REST APIs, React, Vite, Google Gemini AI, Render, Vercel

Online Attendance System Using Facial Recognition (Academic Project)

- Frontend developer on a team project; built responsive HTML/CSS screens for student registration, attendance tracking, and reports.
- Integrated the frontend with the facial-recognition backend with teammates and tested UI responsiveness.

Tools Used: HTML, CSS, Python, OpenCV, Machine Learning

SKILLS

Languages: Python, Java, SQL, JavaScript
Backend Development: FastAPI, REST APIs, CRUD Operations, API Integration, Requests, Pydantic, SQLAlchemy, JSON, Exception Handling
Databases: SQLite, SQL
Frontend Development: HTML, CSS, JavaScript, React, Vite, Recharts
AI/ML Exposure: Google Gemini AI (API integration), OpenCV (image processing basics)
Developer Tools: Git, GitHub, Swagger/OpenAPI, Uvicorn, Render, Vercel, Figma
